21  
1. (Amended) A computer **[program device]** system, comprising:  
at least one first computer connected to a computer network;  
one or more second computers connected to the computer network;  
a control site computer connected to the computer network;  
a computer program storage device associated with said control site computer **[readable by a digital processing system]; and**

a program means on the program storage device and including instructions executable by said control site computer **[the digital processing system]** for performing a method of [steps for] enabling a first computer to cause at least one of said one or more second computers **[computer]** to display a selected file **[preselected page]** from said [a] computer network **[by transmitting, from the first computer to a control site in the computer network, a request for the predetermined page]**, the method comprising

✓ receiving a request for the selected file from the first computer, the request including an address of said selected file;

< [(a)] retrieving the selected file **[predetermined page]** from the address included in said request;

[(b)] if the selected file **[predetermined page]** includes pointers to other files **[pages]** in the network, (1) encoding one or more of the pointers to **[thereby]** render a first file **[page]** wherein the pointers, when selected by a computer user viewing the file **[page]**, direct the user's computer to the control site, and (2) disabling the pointers from the selected file **[predetermined page]** to thereby render a second file **[page];**
